

BLU ADVANCE 4.0L—How to remove the back cover and insert the battery.

To remove the back cover from your device, simply locate the little indent on the side of your phone, this little indent will allow you to pull the cover off.

The indent is located on the bottom right hand side of the phone.

If you turn the phone slightly to the side you will see the little indent, which is approximately 1cm across and a few Millimetres deep.

All you will need to do is insert your finger nail or blunt object into this indent to prise the back cover away.

You May find at first the back cover will be tough to pull away, don't worry just apply a little force to pull the cover completely off.

You will find after pulling away the first side the rest will simply pull away without force.

Your SIM Card will already be inserted for you, so you won't need to worry about this part!

Locate your battery which will be under the cardboard flap in your phone box.

On the battery, locate the side which has the 3 gold looking connectors.

These 3 gold looking connectors will need to match the 3 gold prongs located at the bottom left of the battery-insert in the back of the phone.

You will find once you match up these parts the battery will simply fall into place.

You will know the battery is inserted correctly when you see the (+ -) at the bottom left of the phone, you will also see the BLU BOLD LIKE US Logo.

If you don't see these then you have inserted it incorrectly.

Once the battery is inserted simply clip the back cover back onto the phone, just make sure you line up the back cover with the camera and side buttons. This way you know you have it the right way around!

Apply a slight force to clip the back cover on.

Please see our Quick Start guide on how to use the phone!
